

NIPT

Non-Invasive Prenatal Testing

Non-invasive prenatal testing
to screen for common chromosome abnormalities

NIPT screens for:

- *Down syndrome (trisomy 21)*
- *Edwards syndrome (trisomy 18)*
- *Patau syndrome (trisomy 13)*
- ***Sex chromosome aneuploidy:***
  and fetal sex determination: Sex chromosome aneuploidy involves the presence of an abnormal number of sex chromosomes; fetal sex determination can identify the sex of the fetus as female (XX) or male (XY)
- ***Microdeletions:***
  These are abnormalities caused by deleted chromosomes
- ***Genome-wide aneuploidy detection:***
  Identifies potential abnormalities for 19 additional chromosome pairs

Who is NIPT suited for?

- Women who are over 10 weeks into their pregnancy
- Women who are pregnant with one child or twins
- Women who have conceived naturally, conceived through assisted reproductive technology, or are surrogate mothers

Pregnancy Screening at Bumrungrad International
